PROFESSIONAL OBJECTIVE

Highly accomplished Senior Full Stack Developer with 18+ years of programming experience, including 10+ years in commercial software development, passionately focused on AI and Machine Learning innovations. Proven expertise in leading end-to-end development of large-scale, high-performance, and responsive web applications using **TypeScript, Node.js, React, and Next.js**. Adept at leveraging AI Agent development tools and prompt engineering to accelerate product delivery and create impactful solutions. Experienced in managing full project lifecycles, optimizing user experience, and collaborating with cross-functional teams to achieve strategic objectives in dynamic, ambiguous environments, with a keen interest in blockchain ecosystems.

TECHNICAL STACK

AI & MACHINE LEARNING

AI Agent Development (AGENTS.md, OpenAI Agents SDK)

Prompt Engineering (Feature/Microservice/App from 1st prompt)

OpenAI, Qwen, Gemini, Perplexity APIs

Vector Search (ElasticSearch, MongoDB, AstraDB)

ML Models Usage (TensorFlow JS/Python, PyTorch Basics)

AI-driven TDD (Cursor, Codex, Google Antigravity)

BACKEND & FULLSTACK

TypeScript, JavaScript, Node.js (8+ years)

NestJS, ExpressJS

Python, Go (Basic), Rust (Performance)

Microservices, RESTful APIs, gRPC

Large-scale Responsive Web Apps

FRONTEND & WEB TECHNOLOGIES

React (5+ years), Next.js

Vue, Nuxt

Redux, MobX, Pinia, GraphQL

Tailwind, Bootstrap, SCSS

User Experience (UX) Optimization

DATABASES & DATA MANAGEMENT

PostgreSQL, MongoDB, DynamoDB, AstraDB

Redis, RabbitMQ, Apache Kafka, NATS

Prisma

CLOUD & DEVOPS

AWS (Serverless, Amplify, EventBridge, SNS)

Linux, Docker, Nginx, Basic Kubernetes

CI/CD (GitLab CI, Jenkins, Drone CI)

System Design & Architecture

BLOCKCHAIN & WEB3

Cryptocurrency & Exchange APIs

Web3.js, ERC-20, TON

Basic Solidity & Rust Smart Contracts

EVM Compatible Chains, NEAR Protocol

PROFESSIONAL EXPERIENCE

Lead Fullstack Developer // TMA/TON Game

2025 – Present

[AI AGENT] [FULLSTACK] [BLOCKCHAIN]

- **Orchestrated** AI-driven iterative development with a TDD methodology, utilizing **AGENTS.md** as the primary source of truth for features.
- **Developed** the end-to-end fullstack for a Telegram Mini App (TMA) game, incorporating **Nest.js, Next.js, and MongoDB Atlas**.
- **Integrated** TON Wallet connection and accepted TON payments, alongside a robust referral and inventory system.
- **Leveraged Codex, Google Antigravity, Cursor, Kiro, and Windsurf** for advanced code generation, architecture planning, and review.

Lead Core Developer / Acting CTO // Digital twins, FrieNDA

2024 – 2025

[AI] [FULLSTACK] [BLOCKCHAIN] [STARTUP]

- **Led** the implementation of the core product functionality, covering significant **CTO responsibilities** including AWS configuration, server management, and CI/CD.
- **Drove** the development of a complex fullstack system using **TypeScript, Node.js (NestJS), Next.js, RabbitMQ, PostgreSQL, and MongoDB Atlas**.
- **Integrated OpenAI, Qwen, and Gemini** APIs for advanced AI functionalities and explored **NearAI** capabilities.
- **Coordinated** team efforts and managed integrations with partners, ensuring seamless product delivery and stakeholder satisfaction.

Senior Backend/Fullstack Developer // OpenAI Based Matching System

2022 – 2024

[AI/ML] [BLOCKCHAIN] [LARGE-SCALE]

- **Pioneered** the integration of **OpenAI Embeddings** with **ElasticSearch** for vector search, a novel approach before widespread database support.
- **Developed** a sophisticated matching system based on **OpenAI Embeddings and GPT API**, from initial research to full-scale deployment.
- **Implemented** tokenomics and a crypto cashback system in collaboration with a Blockchain developer, utilizing **Web3.js and ERC-20** on Polygon/EVM compatible chains.
- **Played a pivotal role** in scaling the system to handle large datasets and complex matching algorithms efficiently.

Team Lead / Senior Node.js Developer // Digital Document Exchange

2020 – 2022

[SAAS] [EKYC] [SECURITY]

- **Led** the development of a hybrid SaaS platform for e-signatures, eKYC, and digital contract management using **TypeScript, Node.js (NestJS), PostgreSQL, and GraphQL**.
- **Integrated** third-party **ML platforms for eKYC face validation**, enhancing security and compliance.
- **Managed** the full end-to-end development process, from architectural design to deployment on **AWS with Docker and Nginx**.

Team Lead / Node.js Developer // Cross-Gambling Loyalty Program for Restaurants

2017 – 2022

[HIGH-LOAD] [LOYALTY] [FULLSTACK]

- **Advanced** from Node.js developer to Team Lead, actively participating in **Scrum implementation** and development planning.
- **Engineered** and scaled the backend for a high-volume loyalty program using **Node.js (ExpressJS), MongoDB, React, and Vue**.
- **Implemented Drone CI** pipelines, significantly accelerating release cycles and improving code quality through automation.
- **Optimized** application performance to handle extensive user traffic and complex transaction logic.

Blockchain Research & Development // Crypto Collectibles Project

~2018

[BLOCKCHAIN] [NFTS] [EARLY CRYPTO]

- **Researched** and explored early blockchain ecosystems, focusing on token minting, staking mechanisms, and transaction processes.
- **Gained fundamental understanding** of assigning digital assets in response to on-chain transactions, similar to early NFT concepts.

EDUCATION & LANGUAGES

EDUCATION	**Information Security**, Moscow Technological University
LANGUAGES	**English (Advanced B2-C1)**, Russian (Native), Español (Beginner A1-A2), Français (Beginner A1), Armenian (Beginner)
